

MICHAEL BROWN

MBA, Technology Management · Applied AI · Technical Implementation · Solutions Engineering
Stillwater, NY · boredo22@verizon.net · (518) 879-7949

SUMMARY

Business founder and hands-on builder moving full-time into applied AI and technical implementation. MBA with a computer-science foundation, plus six years running a licensed, heavily regulated company where I designed and shipped the internal software, data pipelines, and monitoring systems that kept operations running. I turn messy real-world requirements into working systems using Python, modern AI tooling, and cloud infrastructure, and I'm at my best getting a product to actually run in production.

TECHNICAL SKILLS

Languages & Data: Python, SQL, JavaScript / HTML / CSS, pandas, ReportLab, data cleaning & ETL
Cloud & Infrastructure: Cloudflare Workers, Docker, Linux (Ubuntu Server), Git, REST APIs
AI & Automation: LLM-assisted development, prompt engineering, RAG concepts, edge AI (NVIDIA Jetson Orin Nano), LLM output evaluation
Systems & Ops: System integration, self-hosted infrastructure, IoT / sensor monitoring, workflow automation, technical documentation

EXPERIENCE

Co-Founder & Vice President — Adirondack Hemp Company, Inc. 2019 – Present
Saratoga Springs, NY · State-licensed vertically integrated company (C-corp)

- Co-founded and scaled a vertically integrated, state-licensed business; owned the technology function and built the entire internal software stack from scratch while managing regulatory compliance, operations, and finances.
- Drive business strategy and finance alongside technology — product-line pricing and unit-economics analysis, budgeting and cash-flow planning, investor relations, and financial and regulatory reporting for a multi-product company.
- Designed and built customer-facing and internal tools end-to-end — the company website, data pipelines, and automated monitoring systems — translating operational pain points into software that shipped and ran daily.
- Used AI-assisted development to move from idea to working production tool quickly, covering front end, back end, data, and deployment as a one-person build team.
- Transitioning to a passive ownership role to pursue applied AI and technical implementation work full-time.

AI Training Contributor (Contract) — DataAnnotation.tech 2026 – Present
Remote

- Evaluate and improve large language model outputs across coding, reasoning, and data tasks; author and review prompts and reference solutions to strengthen model performance on high-difficulty projects.

SELECTED TECHNICAL PROJECTS

- Company Website & OCM-Compliant Store Locator** — Built and deployed adkhempco.com on Cloudflare Workers, including a store-locator that joins internal CRM data against the New York State cannabis registry and meets OCM marketing-compliance rules. *(JavaScript, Cloudflare Workers, data joins)*
- Sales Data Pipeline** — Python workflow that cross-references distributor and dispensary account lists against CRM records to surface zero-sales accounts, producing an enriched Excel report used to target sales outreach. *(Python, pandas, Excel automation)*
- Compliance Label Automation** — Built a tool that parses source PDFs and CSV product data to generate print-ready, state-compliant product labels with a unique QR code per label — cutting a recurring 3-hour manual job to 5 minutes, run twice monthly (~97% time reduction). *(Python, PDF/CSV parsing, QR generation)*
- Environmental Monitoring & Irrigation Automation** — Designed sensor-driven monitoring and control for temperature, humidity, and airflow (EC fans and motorized dampers) plus pressure-compensated precision irrigation across a production facility. *(IoT sensors, control logic, systems design)*
- Cultivation & Document-Generation Tools** — Built harvest-tracking programs and automated multi-page production worksheets and reference cards, plus a QR-code-driven photo intake and approval workflow for retail. *(Python, ReportLab, workflow automation)*
- Self-Hosted Homelab & Edge-AI Lab** — Run a Linux/Docker home infrastructure stack and an NVIDIA Jetson Orin Nano edge-AI environment for self-hosted services and hands-on machine-learning experimentation. *(Linux, Docker, NVIDIA Jetson, self-hosting)*

EDUCATION

Master of Business Administration (MBA), Technology Management 2019
SUNY Polytechnic Institute

B.S., Business Administration · Minor: Computer Science 2017
